

## **SERVICE INFORMATION LETTER (SIL)**

Subject: GDC64 Tablet Aircraft Interface Unit (TAIU)

Applicability: GDC64 Requiring XMD075 Interface

**NOTE: the GDC64 is only approved for iPad versions 8.4 and below. Please check DAC website for information on future iPad releases.**

This Service Information Letter (SIL) is issued to inform operators and installation shops of an optional hardware upgrade to improve the capabilities of the GDC64. This upgrade improves the signal quality of the RS232 signal when connected to a RS422 circuit, i.e. XMD075 XM Receiver.

This upgrade is not a required upgrade and should only be incorporated if the customer is requiring use of the RS232 ports with an RS422 circuit as with an XMD075 Receiver.

Units with this update installed will have MOD 3 Marked out.

This update is not field loadable; customers requesting this update must return the GDC64 to DAC Int. When returning the unit please indicate the desire to upgrade to MOD 3 status.

Please contact DAC Int. customer service at (800) 527-2531 or 512-331-5323 for RMA and pricing information.
